

KVM MEDIUM &amp; LARGE

# WEYTEC distributionPLATFORM

KVM with full functionality

WHY WEYTEC

## POWERFUL & FLEXIBLE KVM

... intuitive control with a multifunctional keyboard

**The WEYTEC distributionPLATFORM (WDP) is a KVM solution that provides users with flexible access to computers and information sources – even across multiple sites. A WDP integrates analog, digital, legacy and third party systems as well as cameras and video walls within a single, independent IP network. Neither software nor driver installations on customer devices are required. With the unique smartTOUCH keyboard, users stay focused on their tasks and can customize their view of, control over and interaction with relevant sources. The WDP is designed for 24/7 operations.**

- Based on KVM IP extenders
- Intuitive control with smartTOUCH keyboards
- Collaboration & free seating across multiple locations
- Customizable, modular & adaptable to individual needs
- Roles & user rights management
- Scalable & future-proof technology
- Redundant configurations
- Independent from customer network
- Integration of video walls
- Integration of 3rd party solutions

## Benefits

Computers secure & efficiently maintained in server room

More space without computers under the desk

KVM IP Extenders for WDP

A smartTOUCH keyboard & mouse controls one or more computers

Unlimited number of desks

Unlimited monitors per desk

Flexible switching between an unlimited number of computers and desks

Integration of multiple video walls and personal video walls

Multiple server rooms for location redundancy

Management of user rights, groups, roles, presets, macros & reports

Free seating

Integration of 3rd party solutions

**User Access**

Computers and sources are all controlled with the WEYTEC smartTOUCH, a multifunctional keyboard equipped with programmable keys and a touchscreen. Visualized on the integrated touch display, PCs and information sources can be assigned to monitors or video walls. Switching between them is easy. Multiple presets can be assigned to physical keys on the keypads. The touch screen functionality can also be extended with a wealth of individual and corporate applications, such as video integration and event visualization.

**Use Case**

Users can access applications, information sources and computers across multiple sites. All sources and workplaces, personal and regular video walls are integrated within a single independent IP network. With smartVISUAL receivers, video sources can be displayed in freely scalable windows on monitors and video walls.

WDP solutions can be extended with a wide variety of third party solutions, including encryption, 2-factor authentication and network monitoring of IP-based components.
