

FrogSensor

Outdoor Parking Guidance System

Flush mounted
intellisense

Surface mounted hybrid

Recessed hybrid

Introducing the Frogparking Outdoor Guidance System, which boasts the **world's first patented outdoor sensor** and a cutting-edge solar gateway. This remarkable technology makes it an essential solution for all outdoor parking areas. The data from these sensors will improve your understanding of your parking assets, occupancy rates, utilization rates and more. FrogSensor also seams beautifully with a number of our software options to improve efficiencies

Built to stand the test of time

With a fifteen-year history, we know our products can stand the test of time, across all variants of our sensors.

Installed in minutes

You can set your outdoor FrogSensor however you like – mount it, make it flush, or even recess it within the road for a seamless and discreet look

Seamless integration

Frogparking sensors can be integrated with any third party hardware - making it a versatile option for managing your outdoor spaces

Accurate detection

Unparalleled levels of accuracy through multiple detection methods

All Frogparking solutions include a customizable dashboard offering comprehensive insights into your parking asset. This real-time dashboard provides unique information about driver trends, behaviors, and preferences, along with tailored reports covering technical, operational, and revenue collection data. Our dashboard facilitates effortless decision-making to optimize revenue and maximize the potential of your parking asset.
