From parking to powering:
**A 360° solution for
park operators**

EV Charging & Smart Car Park Integration

Circontrol's 360° solutions add value for parking operators and enhance the customer experience

Add Value to your parking

The incorporation of EV chargers represents not only a new revenue stream but also a strategic means to attract new customers, specifically EV drivers. This move can significantly enhance the reputation of the car park and increase customer loyalty.

Main features of Circontrol CirPark 360° Solution

- 1** Add value to your parking facilities by incorporating EV chargers
- 2** Offer a ticketless and Plug & Charge experience integrating your facilities with our Usage Management platform COSMOS
- 3** Take advantage of other Circontrol EV Charging solutions such as the Dynamic Load Management to optimise the energy distribution
- 4** Enhance security in indoor car parks with the KSensor video surveillance and licence plate recognition features
- 5** Manage outdoor bay occupancy using the Falcon
- 6** Supervise occupancy using our iPark guidance sensors, all from a single platform
- 7** Provide a better user experience by optimising the traffic in car parks using our indoor/outdoor Dynamic Guidance System
- 8** Illuminate your facilities with low power consumption and low maintenance costs with our LEDPark lighting system
- 9** Our solutions can be easily integrated with other PMS

Combine different smart solutions into a single tool

Future-proof any parking

infrastructure by incorporating

all CirPark Solutions

Advanced capabilities

Beyond conventional guidance sensors, camera sensors, such as the Circontrol KSensor or Falcon, provide more features and benefits for parking owners and customers. These sensors serve dual purposes, doubling as surveillance cameras and license plate readers. Furthermore, they provide real-time occupancy monitoring.

Suitable for any type of facility

Thanks to the incorporation of Falcon, which manages outdoor bay occupancy, Circontrol can offer solutions for any type of parking facility. Additionally, the KSensor can monitor and control indoor parking slots.
