Defining the cities of tomorrow
ibigroup.com

Our Firm

Defining the cities of tomorrow.

We are a global team of dedicated and experienced architects, engineers, planners, designers, and technology professionals who share a common desire – to help our clients create livable, sustainable, and advanced urban environments.

From high-rises to industrial buildings, schools to state-of-the-art hospitals, transit stations to highways, airports to toll systems, bike lanes to parks, we design every aspect of a truly integrated city for people to live, work, and play.

Our collaborative and combined approach focuses not only on creating the best solutions today, but also determining the right solutions for tomorrow.

We believe cities in the future must be designed with intelligent systems, sustainable buildings, efficient infrastructure, and a human touch.

IBI – Defining the cities of tomorrow.

1	TRANSPORTATION EXPERTISE	5
2	REPRESENTATIVE PROJECTS	7

INTEGRATED DESIGN

IBI Group practices integrated design on a daily basis; as part of a large consortium or complex delivery, we are collaborative team members striving to achieve optimal design solutions within a smooth process.

FAST-TRACK DELIVERY

Our global office presence and abundant manpower allows us the flexibility to adjust staffing levels, using global or local resources to meet tight timelines.

INNOVATION

IBI Group has earned a name for being innovative both in transportation planning and in transportation design. Our culture fosters innovative solutions throughout the project life cycle.

TECHNOLOGY

IBI Group uses the latest technology to operate as a global firm and to take advantage of recent developments. Our designs reflect our understanding of the role of systems technology in transportation operations.

Transportation Expertise

IBI Group provides a full range of services related to the movement of people, goods, and information. The firm's transportation planners, architects, and engineers are involved in all facets of transportation projects including urban and inter-urban road, rail, air, and marine public and private modes; EMS, fire, and emergency services; and parking.

IBI Group participates in all aspects of transportation development from policy and planning through to detailed design. In many of these projects we integrate the skills and expertise of our transportation planners, urban planners, architects, and engineers to produce an integrated project.

IBI Group has developed transportation projects on all the inhabited continents of the world. We have built high-speed rail systems in Southern California, transit stations in Tel Aviv, bus rapid transit systems and subway stations in Toronto, and created transportation and transit master plans worldwide.

IBI Group is a leader in the application of technology and information to transportation, offering intelligent transportation systems (ITS) and advanced public transportation solutions to more effectively manage and operate transportation systems. This expertise also extends into revenue collection systems. We have an extensive practice in civil design of roads, bridges, ports, and transit facilities. The firm works comprehensively on international projects, from the planning and project development stages through to implementation and operations including participation in Public-Private Partnerships.

Clients include public and private agencies responsible for the design, construction, operation, and management of transportation infrastructure, transit agencies and other service providers, truck, rail, air, and marine operators, port authorities, intermodal terminal operators, and private developers.

TRANSPORTATION

Representative Projects

IBI Group's transportation project portfolio spans the globe and reflects the many ways that people and things move from A to B. Our transportation practice includes the following services and sectors:

- Urban and Regional Transportation Planning
- Traffic Engineering
- Civil Engineering
- Urban and Intercity Transit
- Transportation and Land Use
- Intelligent Transportation Systems
- Airport/Aviation
- Freight and Logistics

- 1 ARRIYADH ROAD DEVELOPMENT STRATEGY, ARRIYADH, SA – IBI GROUP
- 2 FIRST & LAST MILE STRATEGIC PLAN, LOS ANGELES, CALIFORNIA, USA – IBI GROUP

A

URBAN AND REGIONAL
TRANSPORTATION PLANNING

IBI Group is a worldwide leader in transportation planning, providing a full range of services related to the movement of people and goods for public and private sector clients.

IBI Group has been active in developing regional transportation plans in many parts of the world, examining transportation needs in connection with the future of our societies.

Our services encompass urban and inter-regional infrastructure and cover high-speed rail, rapid transit, light rail transit, bus rapid transit, walk/cycle, road, truck, rail, and marine modes from planning through to design, implementation, and operations. Specialty areas within our transportation planning practice include traffic impact/parking, travel demand forecasting, toll traffic and revenue forecasting, policy, travel demand management, and emergency services.

1

ARRIYADH ROAD DEVELOPMENT STRATEGY
ARRIYADH, SA

IBI Group was commissioned by the Arriyadh Development Authority (ADA) to conduct an accessibility study for eight road corridors in Arriyadh, Kingdom of Saudi Arabia. The aim of the study was to enhance the overall traffic performance of the transportation system by focusing on planning and design improvements along these study corridors. Achieving a balance between transport and urban design requirements was of key importance.

MOBILITY HUB OBJECTIVES

SEAMLESS MOBILITY

- 1** Seamless integration of modes at the rapid transit station.
- 2** Safe and efficient movement of people with high levels of pedestrian priority.
- 3** A well-designed transit station for a high quality user experience.
- 4** Strategic parking management.
- 5** A vibrant, mixed-use environment with higher land use intensity.
- 6** An attractive public realm.
- 7** A minimized ecological footprint.
- 8** Effective partnerships and incentives for increased public and private investment.
- 9** Flexible planning to accommodate growth and change.

PLACEMAKING

SUCCESSFUL IMPLEMENTATION

Seamless integration of modes at the rapid transit station.

One of the essential functions of mobility hubs will be to foster seamless integration between transit modes, systems, and routes, while accommodating efficient connections to all modes of access to and from the station.

THEME ONE SEAMLESS TRANSFERS BETWEEN TRANSIT MODES, NETWORKS, AND ROUTES

- 1.1 Create clear, direct, and short transfers between transit modes and routes by minimizing walking distances and removing physical and perceived barriers within transit stations.
- 1.2 Coordinate local feeder transit service schedules and routes to provide seamless connectivity between local, regional, and rapid transit services by reducing waiting times.
- 1.3 Create prioritized, safe and direct pedestrian and cycling routes to rapid transit stations from major destinations and regional cycling and pedestrian networks.
- 1.4 Provide secure and plentiful bicycle parking at station areas with additional amenities at high-volume locations.

- 1.5 Adopt transit priority measures to ensure the efficient movement of surface transit to and from the station area, including measures such as signal priority and dedicated transit lanes.
- 1.6 Provide clearly marked and protected access for pedestrians and cyclists at station areas to minimize conflicts, particularly at passenger pick-up/drop-off (PUDO), bus facilities, and parking access points.

A vibrant, mixed-use environment with higher land use intensity.

Critical to the success of the mobility hub as an efficient and attractive destination, is the combination of basic employment opportunities and a mix of housing typologies supported with major retail, civic, cultural, entertainment, and community facilities. Clustering of population and employment encourages more efficient travel behaviour, reduces the need for travel, increases accessibility (e.g., proximity to employment, shops and schools), and offers travel choice (better transit, ridesharing, and better pedestrian facilities), thereby making the transportation system more efficient.

The challenge lies in determining a mix of uses based upon the nature and character of the mobility hub and establishing the developer supportive municipal framework.

THEME ONE A DYNAMIC VIBRANT AND COMPATIBLE MIX OF USES WITHIN WALKING DISTANCE OF TRANSIT

- 5.1 Provide a diverse mix of uses, including housing, employment, regional attractions and public spaces to create a high-quality urban environment in close proximity to the transit station.
- 5.2 Focus and integrate increased and transit-supportive densities at, and around transit stations to create a compact built form and a critical mass of activity while ensuring appropriate transition to the surrounding community.

Effective partnerships and incentives for increased public and private investment.

A mobility hub is successful when it attracts sufficient jobs and residents to create a vibrant, transit supportive place. In order to ensure the success of a mobility hub, strategies should be flexible, designed to respond to the diverse nature of the station areas, their surrounding community contexts, and the dynamic nature of GTHA's development market. This will require considerable understanding of development, sophistication in inter-government and agency relations, skill at relating to surrounding communities, as well as an appetite for risk and 'deal-making'.

THEME ONE ENHANCING DEVELOPMENT POTENTIAL, AND ATTRACTING DEVELOPERS

- 8.1 Encourage development by providing developers incentives such as height and density exchange, flexible zoning and through mechanisms like bonds, covenants, and Tax Increment Financing (TIF), to finance mobility hub development.
- 8.2 Plan public investment and infrastructure to create and/or enhance development potential.

THEME TWO ESTABLISHING PARTNERSHIPS BETWEEN STAKEHOLDERS

- 8.3 Encourage public agencies and various Public-Private Partnership models to capture the land value uplift from transit infrastructure investments.

THEME THREE INCENTIVES FOR DESIGN INNOVATION & EXCELLENCE

- 8.4 Establish a development competition as a tool for innovation and excellence in the mobility hubs to help conform to the Mobility Hub Objectives.
- 8.5 Consider design competitions for both public facilities and design review panels into the municipal development approval process.

METROLINX MOBILITY HUB GUIDELINES

TORONTO AND HAMILTON AREA, ONTARIO, CANADA

IBI Group was retained by Metrolinx in October 2009 to further "The BIG Move" initiative and to develop a planning framework to shape the development of 51 mobility hubs identified in the Greater Toronto and Hamilton Area Regional Transportation Plan.

The Big Move, Metrolinx's 25-year transportation plan, imagines a future in which key transit stations become mobility hubs, where transportation modes, including rapid transit, specialized transit, cycling, and accessible pedestrian networks come together seamlessly. Mobility hubs are locations for major destinations such as offices, hospitals, educational facilities, and government services. They offer amenities to travellers such as heated waiting areas, traveller information centres, cafes or restaurants, and services such as day cares, grocery stores, and post offices.

The goal of this study was to develop a document that would clearly communicate the mobility hub concept including objectives, components and the value and role of hubs. In addition, the guidelines provide detailed guidance on how to develop mobility hub master plans and incorporate mobility hub objectives into other planning activities such as official plans, secondary plans, station plans, and environmental assessments.

B

TRAFFIC ENGINEERING

IBI Group provides innovative, comprehensive solutions that improve the safety and efficiency of road networks, intersections, roadways, site accesses, and parking facilities. These solutions address social, environmental, and fiscal responsibilities as well as improving mobility for all citizens.

Starting from one of our predecessor firms which developed the first computer-controlled traffic control system in the world, IBI Group has continued to innovate as leaders in traffic engineering and to apply new technology to traffic control.

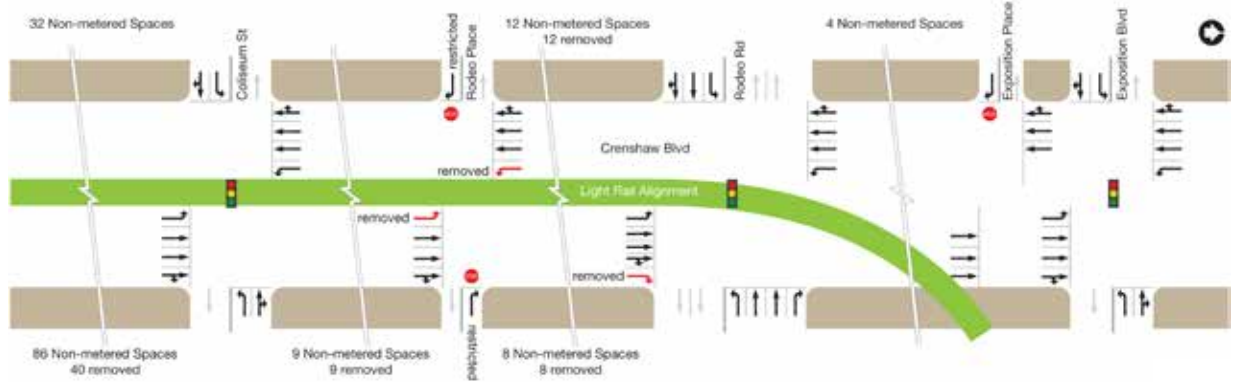

The area of practice includes design of intersections and roundabouts, operations support, signals systems design, transit signal priority, impact studies, and road safety services.

JEDDAH WATERFRONT TRAFFIC IMPACT STUDY JEDDAH, SA

As part of the project “Development of Waterfront areas in North Corniche and Faisal Bin Fahd Street at Jeddah” of Jeddah Municipality, IBI Group conducted a traffic impact study that involved two zones of the waterfront in northern Jeddah.

CRENSHAW LRT

LOS ANGELES, CALIFORNIA, USA

IBI Group is a lead member of the Crenshaw Light Rail Transit (LRT) preliminary engineering team for Metro in Los Angeles. The project will provide a connection from the Exposition Line to the Green Line at LAX. The 8.5 mile line includes both on-street median running and separated railway with gated crossing operations. The one-mile section of median running will be on one of the most heavily used arterials to ever implement on-street LRT running, with traffic volumes over 55,000 vehicles per day and trains with six minute headways in both directions.

IBI Group provided the traffic analysis, preliminary roadway design, traffic engineering, and the design of the park and ride lots for the entire corridor. We also provided the traffic engineering design for the CPUC grade crossing applications. The traffic analysis provided both traditional levels of service and delay information for intersections along the corridor and adjacent intersections, as well as microsimulation of vehicle and LRT operations using VISSIM.

We developed preliminary roadway design plans for the corridor, design of three park and ride lots, striping plans, traffic signal layouts for 22 intersections, and the stage construction plans for the entire project. IBI Group also provided support for planning and community-based design by providing information on bus transfer operations, analysis of parking impacts and replacement, and coordination with the proposed LAX automated people mover system.

CIVIL DESIGN

IBI Group has a full range of skills to develop and design major transportation infrastructure projects, from transit facilities to major urban and inter-urban freeways. We provide these services to all levels of governments and to the private sector.

IBI Group expertise covers every aspect of the rehabilitation, expansion, and development of new roads, urban freeways, complex interchanges, toll roads, bridges, and support infrastructure providing clients with functional and smart design solutions.

HURONTARIO STREET/QEW INTERCHANGE MISSISSAUGA, ONTARIO, CANADA

This Ministry of Transportation Ontario (MTO) project required the reconstruction of all existing interchange facilities while safely maintaining traffic and pedestrian movement through the site with minimal disruption. To achieve this, IBI Group developed and utilized a complex construction staging sequence, including delay and queuing analysis.

JAMBOREE ROAD WIDENING AT I-5 INTERCHANGE

IRVINE, CALIFORNIA, USA

IBI Group led a multidisciplinary consultant team in the preparation of final design documents for the Jamboree Road widening and I-5 interchange modification project within the City of Irvine. In addition to providing project management services, IBI Group is completing the roadway/civil and staged construction design, and is preparing the specifications and Engineer's Estimate.

Caltrans is serving as lead oversight agency for this multi-jurisdictional project, and the design and associated bid package are being completed per Caltrans standards. The project schedule required that the construction contract be awarded by April, 2011 to qualify for Federal funding, which dictated a nine-month PS&E schedule. IBI Group successfully met this aggressive schedule, and the bid package was approved by Caltrans on December 17, 2010.

STAGE 1

- Erect permanent and temporary construction area signs
- Perform Temporary lane and ramp closures and install Temporary railing Type K, Temporary Crash Cushions and Channelizers
- Re-stripe existing lanes and install temporary striping and pavement markings
- Construct the Tie-Back walls, retaining walls and non-conflicting portions of the Jamboree Road widening
- Dig out and replace the existing pavement on the eastbound lane adjacent to the existing curb and gutter
- Construct non-conflicting portions of the freeway ramps

STAGE 2

- Perform Temporary lane and ramp closures and move Temporary railing Type K, Temporary Crash cushions and channelizers to new locations
- Re-stripe and install temporary striping and pavement markings
- Construct remaining portions of Jamboree Road, and freeway ramp widening
- Re-stripe and install temporary striping and pavement markings
- Construct remaining portions of Jamboree Road, and freeway ramp widening

STAGE 3

- Re-stripe lanes to provide adequate lane configurations around the over excavation (dig out) areas along Jamboree Road
- Perform the remaining necessary dig outs and replace the pavements
- Dig out areas not completed during normal working hours will be covered with steel plates
- Perform cold plane and place Asphalt Concrete overlay
- Re-stripe to final lane configurations

D

URBAN AND INTERCITY TRANSIT

IBI Group has a comprehensive and high-profile portfolio of rapid transit experience in Canada, the United States, and abroad, including BRT, LRT, heavy rail transit, commuter rail, and intercity rail systems.

IBI Group’s particular strength is the extensive knowledge base and experience of its staff with respect to transit planning, transit operations, and associated issues. IBI Group’s transit practice utilizes transit planners, transportation engineers, market researchers, equipment, and systems specialists who have practical experience and current knowledge of the latest technology.

We provide services from operational planning to design of facilities.

1

STEELES WEST STATION TORONTO, ONTARIO, CANADA

Steeles West Station, is one of six new subway stations on the \$2.6 billion extension of the Spadina subway line from Toronto into the City of Vaughan. This station will serve as an integrated regional transport hub serving up to 20,000 subway passenger trips daily with 1,900 commuter parking spaces, two separate regional bus terminals, and a future LRT stop connected directly to the station.

 *Intended to become a new civic landmark with unique and world-class architecture.*

YORK REGION VIVA BRT PHASE I AND PHASE II YORK REGION, ONTARIO, CANADA

IBI Group is the founding member of a consortium of nine companies that have entered into a Public-Private Partnership with the Regional Municipality of York to build rapid transit in the region. York Region comprises the suburban municipalities situated to the north of the City of Toronto. The York Consortium is responsible for planning, financing, designing, constructing and operating rapid transit in York Region, a process that is will take over 10 years and in the order of \$2 billion to complete.

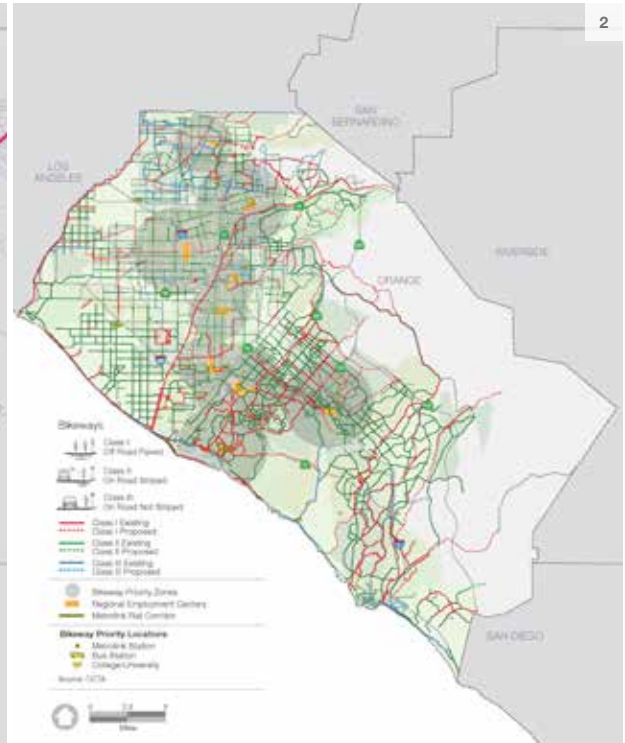

IBI Group is responsible for all aspects of transit and transportation planning for the project, including ridership forecasts, corridor definition, technology specifications, facilities design, transit network integration, service planning, fare policy, fare collection, traffic optimization, ITS, and implementation staging. The team designed and procured systems for the “Quick Start” Phase implementation of a BRT service operating mostly in mixed traffic with signal priority and queue jump lanes. The second phase, which includes the development of exclusive lanes, is now under construction.

E

TRANSPORTATION AND LAND USE

Understanding the close relationship between the development of transportation networks and land use has been a guiding principle of IBI Group since our founding in 1974. Our transportation planning is always keenly aware of the potential impact of transportation on land use.

Successful land-use planning must include the transportation elements required to accomplish the plan and complete the survey work effectively. Our land-use planners and transportation planners work collaboratively to ensure that their work is integrated.

1

NAYA RAIPUR TOD STUDY NAYA RAIPUR, CHHATTISGARH, IN

The Naya Raipur Development Authority, with support from the World Bank, has commissioned IBI Group to develop a transit-oriented development strategy for Naya Raipur to better integrate land development, transportation, and infrastructure investment within the overall city development plan. The Naya Raipur TOD Study will create the framework for future development in the new capital city and outline a preferred scenario for sustainable growth within the city.

The project is being funded under the Global Environmental Facility (GEF)/ World Bank assisted Sustainable Urban Transport Project (SUTP)

WEST VILLAGE AREA REDEVELOPMENT PLAN CALGARY, ALBERTA, CANADA

A major site became available for redevelopment to the west of Central Calgary. Following the city's decision to not bid for an EXPO and instead proceed with redevelopment of the site, an Area Redevelopment Plan (ARP) was prepared to provide the vision through which the site will be transformed into an attractive, vibrant riverfront community.

Focused on the new Sunalta LRT Station, the plan for West Village provides the basis for a pedestrian-oriented, sustainable urban community, comprised of mixed-use residential, retail, office, and light industry. The vision for West Village is that of a "complete community" one where residents can live, work, learn, meet, play, and move within walking distance of efficient public transit and, importantly, where the private automobile becomes an option, as opposed to a necessity. This notion is consistent with the city's efforts in Transit-Oriented Development (TOD) at specified LRT stations within existing and future transit corridors, as well as the larger goals and objectives of Plan-It Calgary.

AIRPORT/AVIATION

IBI Group’s airport practice covers three major areas of operation: airside, terminal, and landside. We provide consulting services requiring cross-discipline expertise in these areas as well as act as designers, integrators, or turnkey providers of airport systems.

Master planning is one of the foundations of our practice. Services include planning, operational analysis, engineering, and architecture.

Transportation to and from airports is an important part of our practice, including road access, transit, and for-hire vehicle services. IBI Group designs systems to track public vehicles and to collect tolls on these operations.

In addition, IBI Group works in more specialized areas such as airfield lighting, baggage handling, aircraft de-icing, terminal design, air cargo areas, and the design of ancillary facilities such as hotels and hangars.

SOUTH CARGO APRON EXTENSION HONG KONG
HONG KONG, CN

IBI Group designed, supplied, installed, and commissioned airfield lighting components (inset and elevated taxiway lights) for the South Apron Expansion works. All software modifications to the Airfield Ground Lighting (AGL) System were developed, tested, and implemented by IBI Group. The new lighting circuits and modified software was commissioned to full operation by IBI Group.

TORONTO PEARSON INTERNATIONAL AIRPORT TERMINAL DEVELOPMENT

TORONTO, ONTARIO, CANADA

IBI Group, a partner of the MGP joint venture, has provided program management, transportation, and architectural/engineering consulting services at Toronto Pearson International Airport (TPIA) since 1997, when the Greater Toronto Airports Authority (GTAA) embarked on a massive development program to re-establish TPIA as a major aviation hub in North America. During that time, we've overseen the design and construction of the new terminal, ground, and airside infrastructure. Project scope includes:

- New terminal with an annual capacity of 36 million passengers and includes major piers with state-of-the-art aircraft docking, passenger information, baggage handling, and security systems
- Extensive advanced security screening systems (travellers and baggage)
- New parking structure with over 12,000 car capacity
- New uni-rail People Mover for efficient inter-terminal traveller flow
- New extensive highway and roadway system to allow easy traffic flow in and out of the airport
- New aprons, taxiways and runway to accommodate the anticipated increase in air traffic
- New traffic control tower with state-of-the-art software, hardware, and telecommunications systems
- Demolition of Terminals 1 and 2

FREIGHT AND LOGISTICS

IBI Group has performed studies of port requirements for government departments, regional development agencies, port authorities and private sector clients. Our services address all aspects of port planning and operations from marketing of port services to detailed planning of facilities and transportation linkages.

Intermodal operations have been a very important part of our analysis of port operations and needs. IBI Group's systems practice understands port operations and recognizes the increasing needs of today's trade market to use advanced technologies in order for ports to increase density and improve efficiency in operations.

IBI Group has provided services to many different types of rail systems, from mainland railways to metro and light rail transit systems. We have worked on freight and passenger systems for public and private sector clients globally.
