We give you an **efficient solution** for managing your **parking in real-time**

MOBLISIS RPS - Radar parking sensor

Why Choose Mobilisis RPS?

Fast, accurate and reliable vehicle detection regardless of traffic, weather and surface conditions

Wireless detection and communication

Easy data visualization using Cloud based interface

About Mobilisis Solution

They key component of our solution is Mobilisis Radar Parking Sensor (RPS). That is an autonomous wireless sensor - a compact and easy to deploy device for monitoring single parking spots. Together with Smart parking Cloud it gives a complete parking management solution integrating multiple technologies to deliver the most advanced parking system available today. It does not require additional software installation as the interface is easily accessible using a web browser.
