

**Water borne  
road marking paint**

The environmentally beneficial road marking system

# AquaRoute® – the environmentally beneficial road marking system

The advanced development in dispersion-binders enables applications in versatile areas.

Geveko Markings was one of the pioneers of these systems on the European market.

Our waterborne systems now have proven quality for over 15 years. The monitored experience is continually flowing back to enhance our paint.

## So easy, if it needs to be fast ...

AquaRoute® UWS-BST is the ideal water borne marking material if fast drying time is required.

The special formulation allows a pass-over-time of < 4 min after application. For changing weather conditions with risk of spontaneous rain showers, customers value the extraordinary fast water-resistance of our AquaRoute® UWS-BST.

The drying-time at wet film thicknesses of 400 µm is less than 1 min after application. The marking is shower-proof after this period (patent n°. EP 0654068).

*Dispersions can be applied on all traffic areas, either directly or after priming. The advantages of our water-borne systems stand out when ease of use, safety regulations, worker-, fire-, or explosion protection play an important role.*

## Application

Machine application can be done with standard commercial marking equipment. Dispersion paints can be applied manually with all established tools (brushes, rolls or spray guns).

Depending on viscosity and properties of the marking material different methods of application, like airless or vaporize-technique can be utilized. By using AquaRoute® with our certified beads both Type I and Type II markings can be applied. This is confirmed by many certificates. Our approvals and our recommendation list for the application can be found in the Technical Data Sheet.

## Temporary paint

AquaRoute® Tempi is a temporary water based road marking paint that is perfect for temporary road markings or track markings. It can be re-routing on roads or in airports; for covering permanent markings for a limited time period; or for events like city runs, marathons and exhibitions – where a short term marking is required.

AquaRoute® Tempi is worn down fast by wear from traffic and weather. The lifetime of the markings are typically 3 - 8 weeks depending on the thickness of the line, place of application and general wear and tear from traffic and weather.

Also, AquaRoute® Tempi can be removed by high pressure water jet blasting.

# Colour palette

Available in the standard traffic colours.  
Also available in other colours on request.

# Certified Quality

Geveko Markings has been certified to ISO 9001 quality standard for many years. This has resulted in a high degree of transparency, accountability and traceability in all our processes relevant for quality. Along with ISO 9001 all our certified products are submitted to annual external controls by quality audits. Our cold plastic materials have already undergone extensive road tests in various countries and have been certified by the relevant authorities. We have approvals and certificates from authorities from Germany (BAST), France (ASQUER), Belgian (CORPO), Spain (AETEC) etc. Over the last 50 years Geveko Markings has evolved in a process of continuous development for approved road marking materials. This has resulted in a product that is of high quality, superior performance, user-friendly, safe and delivered on time.
