

**Solvent borne  
road marking paint**

Quality on all surfaces

# HSRoute® – Quality on all surfaces

HSRoute® marking paints contain our group of high-solid products. Through their distinctive characteristics they cover a variety of applications.

HSRoute® are 1-component low solvent high-solid paints for road markings of Type I and Type II with enhanced night time visibility during wet conditions.

They are well suited for permanent markings on concrete as well as bitumen surfaces. They are used for edge and center lines on country roads, highways and airports.

## Application techniques

- Low pressure (pneumatic)
- High pressure (airless)

For diluting and optimization of the spray pattern as well as for cleaning purposes we offer a specially adjusted HSRoute® Thinner.

## HSRoute® AntiSkid

HSRoute® AntiSkid paints have been developed for high skid resistance to target applications where maximum grip on center and edge lines, parking or smaller areas is required.

Our HSRoute® AntiSkid paints have proven history. Due to their extraordinary high SRT-values there is a high demand from applicators for these markings.

## HSRoute® POX

HSRoute® Pox paints are solvent-borne 2-component marking paints for both indoor and outdoor applications.

They are being used on parking areas or production halls with superior resistance to mechanical stress or high shear forces. In addition these systems show low blackening characteristics.

# Colour palette

Available in the standard traffic colours.  
Also available in other colours on request.

# Certified Quality

Geveko Markings has been certified to ISO 9001 quality standard for many years. This has resulted in a high degree of transparency, accountability and traceability in all our processes relevant for quality.

Along with ISO 9001 all our certified products are submitted to annual external controls by quality audits.

Our cold plastic materials have already undergone extensive road tests in various countries and have been certified by the relevant authorities. We have approvals and certificates from authorities from Germany (BAST), France (ASQUER), Belgian (CORPO), Spain (AETEC) etc. Over the last 50 years Geveko Markings has evolved in a process of continuous development for approved road marking materials. This has resulted in a product that is of high quality, superior performance, user-friendly, safe and delivered on time.
