

ALL EYES ON MOBILITY

English

Q-LITE
THE SMARTEST KIND OF ATTENTION

MOBILITY SOLUTIONS

In one word, Q-lite is attention.

Our approach is full service and our products and solutions are frontrunners in quality, innovation and sustainability. But what counts for you is what they offer you.

Solutions that ensure they get the right attention at the right time. Attention from every cyclist, traveler or driver. Or exactly that target group that you have in mind. Attention for everything you want attention for and everything that deserves attention. All eyes on you.

RAAAK PLATFORM

RAAAK is our platform for controlling, monitoring and maintaining all your systems. To guarantee the availability (> 98%) of your systems, our support department is continuously connected to the platform. All components of the system are monitored 24/7. And thanks to the diagnostics, there is detailed insight in the performance of your system.

With the RAAAK platform it is also possible to easily making a connection with with external systems. For example travel time tables, traffic information and wheater information.

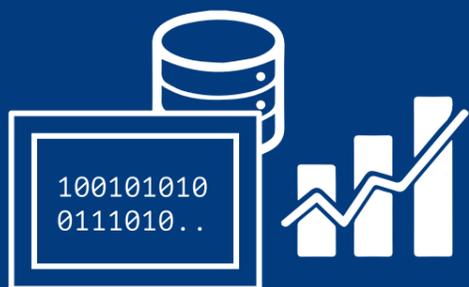

raaak

USER

Using the online dashboard, a user has worldwide access to the platform. All the systems can be managed and adjusted from this dashboard.

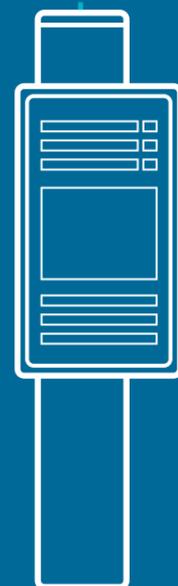

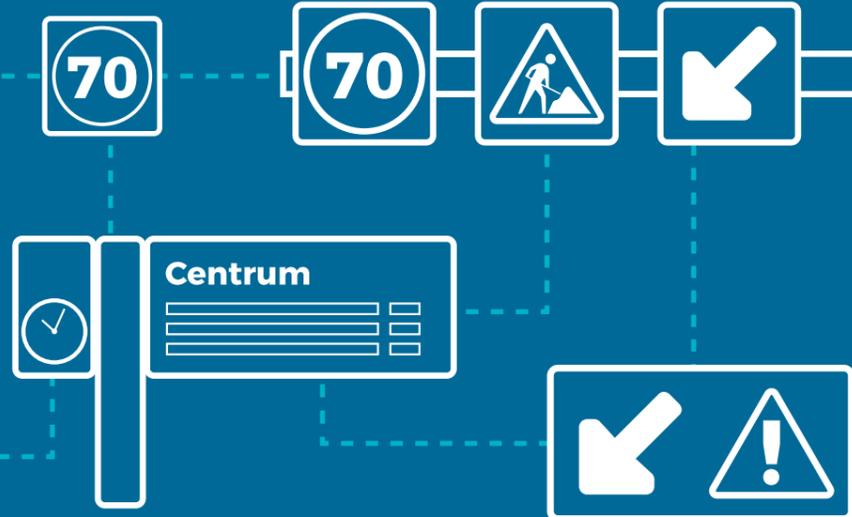

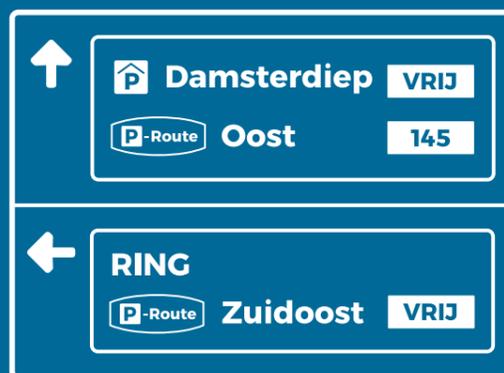

DATA INPUT

Using the online dashboard, a user has worldwide access to the platform. All the systems can be managed and adjusted from this dashboard.

TECHNICAL MANAGEMENT

Our support department are in constant touch with the platform to guarantee the availability of your systems. All system elements are monitored 24/7, whereby updates are rolled out quickly and easily through the cloud.

SYSTEMS

The information from the RAAAK platform is made visible on your display system. And that's not all; displaying information in an app, on a website or in a third party system is also possible.

THINK AND ACT CIRCULARITY

Our strategy is to minimize the negative impact on people and the environment.

We do this, for example, by keeping our display solutions in good condition for as long as possible. After all, this limits CO₂ emissions, the unnecessary use of raw materials and the amount of waste. We are also a forerunner in developing energy-efficient and even stand alone systems. The use of E-ink as a sustainable display technique is a good example of this strategy.

Sustainability – The E-ink-technology hardly uses energy.

Dynamic Route Information Panels – These displays show actual route information to the road user.

TRAFFIC

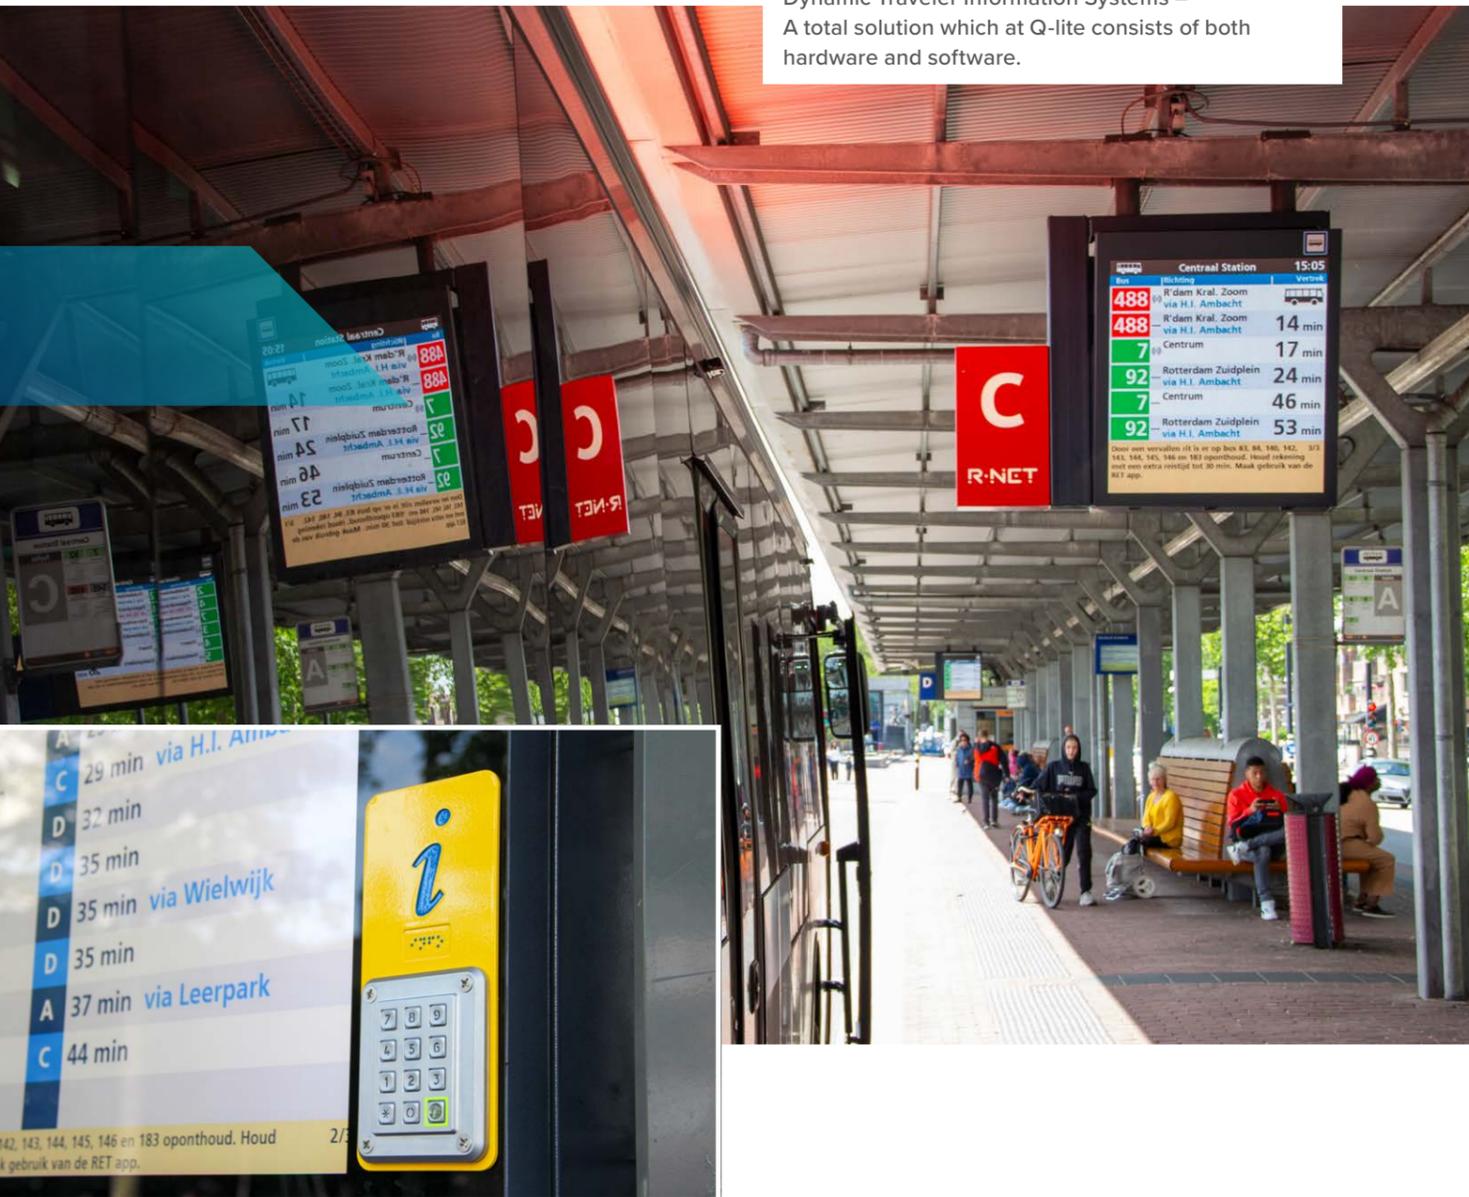

Dynamic traffic management is used to stimulate good traffic flow. By offering the right information at the right time you can influence the behavior of the road user. The display systems fully comply with the NEN-EN12966 specifications. This guarantees the optimal readability and quality of the system.

PUBLIC TRANSPORT

Up-to-date and reliable travel information is important to travellers on public transport. Solutions from Q-lite are reliable, innovative and fully tailored to the needs of customers. Using our new PTIS* as a Service concept, travel information can be accessed quickly and easily for a fixed monthly amount.

* Dynamisch Reizigers Informatie Systeem

Dynamic Traveler Information Systems –
A total solution which at Q-lite consists of both
hardware and software.

PARKING

Our solutions for traffic guidance in urban areas provides the answer to long queues outside car parks or unnecessary (search) traffic through the city center. A Parking Routing Information System provides active route guidance for motorists who want to park. And at the same time it provides information about the availability of parking spaces and contributes to better traffic flow.

Parking Route Information System (PRIS) – Thanks to a PRIS you will find a free parking space easily and quickly!

SHIPPING INDUSTRY

The extensive network of rivers and canals in the Netherlands constitutes a major supply matrix for maritime traffic. Due to the increasing volume of traffic on the water and the computerisation of locks and bridges, the shipping industry is clearly benefiting from improved information provision.

Shipping Information System – The ideal solution for showing actual information to shipping.

PEDESTRIANS

Pedestrians in urban areas can be perfectly informed thanks to digital dynamic wayfinding from Q-lite. Digital maps showing walking distances, and a dynamic reference to major hotspots, are important tools to enable local governments to enhance the comfort of visitors to the city.

Wayfinder – In addition to showing information, the Wayfinder can collect information thanks to various sensors.

Bicycle Information System – They not only point the way, the cyclist sees immediately also in which parking facility it is busy and where it is not.

CYCLING

Cycling is a popular means of transport in the city. It's by far the fastest means of transport to get from A to B in the city. Accurate information about bicycle routes and available places in bicycle parking it's therefore important.

MOBILE APPLICATIONS

The dynamic provision of up-to-date information for road users during road works or traffic incidents contributes to efficient traffic flow. A mobile information system is the ideal means of communication at any required location at the roadside.

Mobile applications play an important role in the smooth flow of traffic.

DEVELOPMENT

We see ourselves as true 'boffins' who are greatly attached to the world of applied technology. And it's also why we design, develop and produce all our hardware and software ourselves. The benefit of this approach is that we are in control of the entire process and can always help you to find the optimal solution.

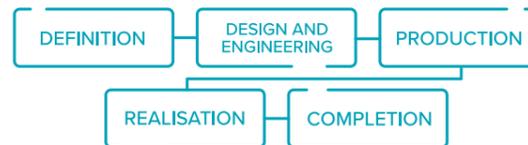

INSTALLATION, IMPLEMENTATION AND COMMISSIONING

Obviously, we take care of all professional on-site installation and implementation ourselves. The result? Successful commissioning and satisfied customers.

PROJECT MANAGEMENT

By virtue of our agile project approach, we ensure that we run through the whole process to your entire satisfaction. Flexibility and clear framework conditions, together with a transparent method of operation, make sure that together we can make a success of any project.

MAINTENANCE

Rest assured that we are not going to leave you to cope alone once the project has been commissioned. Our Support Department have been gathering experience in the management and maintenance of information systems since 1998. And with a *Service Level Agreement (SLA)* you will always be sure of the optimal availability of your system.

Discover the possibilities in our showroom

We would like to invite you to our unique Visual Experience Center in Baarle-Hertog/Nassau and let you experience the difference in pixel pitch, resolution and appearance of our display-solutions.
